

RB Series Horizontal Shaft Impact Crusher

ENGINEERED PRODUCTS

The RB Series was developed in cooperation with a leading equipment manufacturer. The line targets high production primary and secondary applications in need of heavy duty machines.

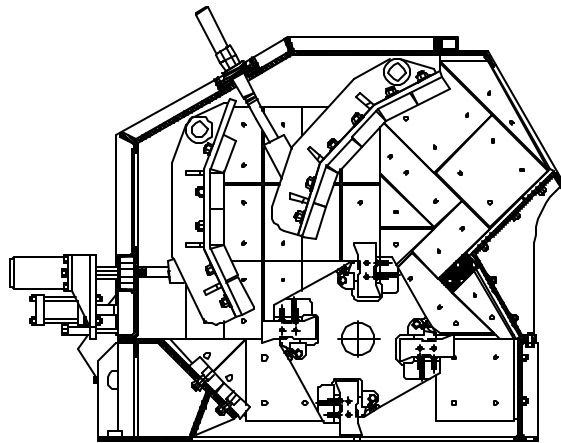

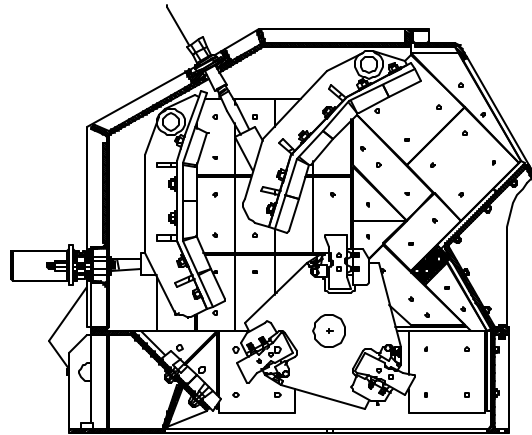

THE RB SERIES

These crushers are available in three or four bar configurations, depending on the desired application. These horizontal shaft impact crushers are capable of serving in both primary and secondary applications, as well as in the growing C&D recycling marketplace.

With adjustable primary and secondary curtains, product size can be controlled to meet many specifications.

These units are built with durability in mind, and are much heavier than many comparably sized crushers available on the market today.

The machines come with hydraulic cylinders for opening and closing. Hydraulic cylinders are available for the secondary crushing curtains.

Applications

Primary and Secondary Hard Rock Crushing

Mixed Demolition Debris

Crushed or Broken Concrete

Asphalt

River Rock

Premium Features

Hydraulic Primary Curtains

Oversize Bearings and Shaft

Models/Sizes

43" x 40"

43" x 60"

52" x 60"

52 x 60" Solid Rotor

52" x 80"

Other Considerations

Low Price Guarantee

Minimal Lead Times

Off-the-shelf parts

Nationwide distribution

One Year Replacement Warranty
